

Boulevard Bollard Planter

This planter is heavy duty, made solidly from thick structural uprights, side panels and bottoms of **100% recycled plastic**. *These are **water and weather protected**, with UV inhibitors, as well rot-free and resistant to acid, alkaline, oil, sand and **salt**.*

This **planter has been built for strength and toughness** and not necessarily for aesthetic beauty, although its beauty really is in its utilitarian ability. *For example, keeping cars, bicycles and pedestrians separated ...certainly much more than a line painted on the pavement!*
